

Female Reproductive Anatomy

ACROSS

3. contains germ cells
6. primary oocyte surrounded by several layers of granulosa cells
8. primary oocyte surrounded by a single layer of squamous cells
10. provides structure to ovary
13. small diameter; very muscular; 2nd half of oviduct\
14. surface epithelium covering the tunica albuginea
16. funnel shape that covers the ovary to capture the ovum

DOWN

1. the only part a mare can ovulate from
2. several cell layers present; antrum present
4. site of fertilization
5. central part of ovary
7. where vessels, nerves, and ducts enter an organ
9. hormone production
11. large diameter; 1st half of oviduct
12. primary oocyte surrounded by a single layer of cuboidal cells
15. sex cell production; released and travels down tube
